Sample Details : MY-GL-131223017 (Serum)

Galactomannan antigen test (ELISA)

Result of Investigation:

Index: 0.48

Sample Remarks :

GALACTOMANNAN ASSAY CUT-OFFS FOR SINGLE SERUM SAMPLE:
As per new update of Consensus Definitions of Invasive Fungal Disease in 2019 and 2021 (from the Infectious Disease Society of America) the updated criteria for POSITIVE GALACTOMANNAN ASSAY are:
Serum GMI \geq 1.0 (immunocompromised patients) OR \geq 0.5 (immunocompetent critically ill patients)
GMI below the respective cut-off is considered a negative galactomannan assay. Negative results do not rule out the diagnosis of Invasive Aspergillosis. Twice weekly repeat testing is recommended.

This is an electronically generated report, authorized signature is not required. The test reports have been authenticated. Partial reproduction of the report is not permitted.
